International Society of  
Critical Care Nephrology

## Webinar Series on Dose, Dialytrauma and Sustainability in CRRT

The **vision** behind the **International Society of Critical Care Nephrology (ISCCN)** is to improve the profile of Critical Care Nephrology as a speciality across all ages and promote the discipline through public advocacy, fostering networking, and acting as a hub for information sharing. This will lead to career opportunities and mentoring, as well as leadership training and professional development.

Therefore we are delighted to introduce a series of Webinars discussing **CRRT Dose** in relation to **Dialytrauma**, **Dynamic Dosing** and **Sustainability**.

Wednesday, April 8<sup>th</sup> – 10.00 CET (09.00 UK – 16.00 Bangkok – 18.00 Melbourne)

### **Dose and Dialytrauma – Is more CRRT always better?**

Emerging evidence suggests that higher doses of Continuous Renal Replacement Therapy (CRRT) may cause harm rather than improve outcomes.

Join **Dr Emily See** (Royal Melbourne Hospital) as she reviews the evolving evidence behind dialytrauma and CRRT dosing, and shares practical strategies clinicians can apply to optimise therapy delivery while minimising unintended harm in everyday practice.

**Read more and Register here or via the QR code to join Dr Emily See on April 8<sup>th</sup>**

If you are unable to join but registered as an attendee, you will be able to access the recording of the session available on the ISCCN website.

On Tuesday, April 28<sup>th</sup> 11.00 CET (10.00 GMT), **Dr Chris Kirwan** will discuss  
**CRRT – Dynamic Dosing**

On Tuesday, May 26<sup>th</sup>, **Dr Bairbre McNicholas** will talk about  
**CRRT – Sustainable Prescribing & Practice**
